National Conference on
Recent Trends in the Interventional Approaches of Autism Spectrum Disorder

Autism Spectrum Disorder (ASD) affects around 3 million people in the Indian subcontinent, and is being increasingly recognized as an important issue. The socio-ethnic diversity and varying cultural practices play major role in the identification, perception and treatment of the disorder.

Autism Spectrum Disorder is a condition that affects individuals across social, ethnic and geographic groups. However, the way it is perceived, understood, accepted and treated may vary across regions, depending on cultural beliefs and practices. As suggested by prominent Indian psychologists, Indians largely emphasize conformity to social norms and value social relatedness. Hence, a disorder that is defined by deviant social functioning has special significance in our country.

Psychological interventions are action taken by psychological professionals to bring about the significant changes in a client. There are wide range of intervention techniques available for the Children diagnosed with Autism Spectrum Disorder in order to enhance their adaptive behaviour and cognitive abilities. This conference aims to focus on the innovative and recent interventional approaches in Autism Spectrum Disorder. This conference is the perfect stage for initiating new innovative ideas, capabilities and discoveries that need to be explored in this field.

The conference invites research papers in the recent interventional approaches of Autism Spectrum Disorder of the following thrust areas:

- Medical Management
- Psychological Interventions
- Sensory & Speech Therapy
- Educational & Vocational Training
- Family & Its Management
- Social & Rehabilitation Models
- Integration & Inclusion
- Topics related to mental health
